

Atmos Hydrostatic Tester

A portable hydrostatic tester that can be utilized in different configurations to identify and locate leaks and thefts when hydrostatically testing pipelines

The challenge

Current methods of hydrostatic testing can have limitations on the ability to locate a failure point on a pipeline. Leak location methods such as using dyed and/or odorized water, aerial surveillance, and dog surveillance can prove to be difficult when a pipeline is below ground. Atmos Hydrostatic Tester uses easy to install hardware to detect and locate the failure points on a pipeline and reduces the cost and time to locate a leak during hydrotesting.

Atmos Hydrostatic Tester user interface

Features

- Easy to install
- Multiple methods of pipeline analysis
- Portable and battery powered
- Generates test reports

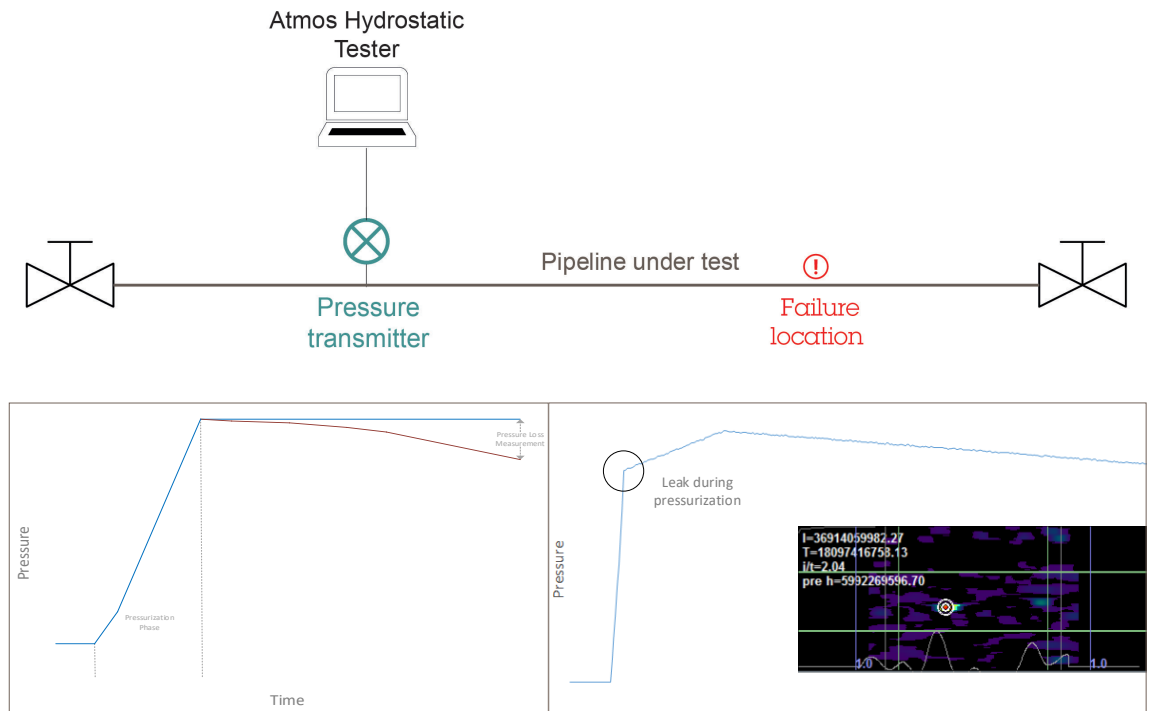

Benefits

- Locates leaks
- Quick and easy to install
- Rental or service options
- Identifies and locates very small leaks or intermittent illicit tapping
- Removes the need for injecting dyed water and large costly monitoring operations

How does Atmos Hydrostatic Tester work?

Configuration

The Atmos Hydrostatic Tester determines if a leak is present in the pipeline and would be used during pressurization. The system connects to the pipeline in the following manner:

About Atmos International

Atmos International (Atmos) provides pipeline leak detection and simulation technology to the oil, gas, water and associated industries. The company was founded in 1995 in the UK by the inventor of the statistical pipeline leak detection system – Atmos Pipe, now one of a suite of leak and theft detection solutions from Atmos. These technologies are implemented on hundreds of pipelines in over 50 countries, including major oil and gas companies such as Shell, BP, ExxonMobil, and Total. With associated offices in the USA, China, Russia, Singapore and Costa Rica, and local agents in 28 countries, the multi-cultural and multilingual team can provide effective support all over the world.
